WORK EXPERIENCE

Embedded Software Engineer

Digitize, Inc., Lake Hopatcong | 08/2024- 02/2025

- Designed and implemented firmware for 8051 and Arduino microcontrollers, ensuring optimized performance and reliability in embedded systems
- Developed and tested low-level drivers for peripherals using UART, SPI, and I2C communication protocols
- Implemented TCP/UDP functionality to enable seamless data transmission and system connectivity
- Designed, assembled, and programmed custom PCBs
- Diagnosed and resolved hardware issues using multimeters and thermocouples, ensuring device stability and operational efficiency

PROJECTS

Temperature Monitor

C, Arduino, OpenSCAD

- Developed an automated temperature monitoring system for long-term data collection
- Allows for the user to define and track safe temperature thresholds, enhancing user responsiveness and minimizing potential equipment damage
- Implemented UART and TCP communication for remote data transmission
- Designed and 3D-printed an enclosure for portability and ease of use

Payment Tracker

React, Node.js, MongoDB, Express, SCSS

- Developed a web-based application for users to efficiently manage their payments
- Utilized Express to enable communication between the front and back-end
- Implemented MongoDB for efficient data storage, allowing easy retrieval and modification of user information
- Enabled full CRUD functionality, ensuring real-time synchronization through server

EDUCATION

B.S. Computer Science

CUNY Brooklyn College

June 2023

SKILLS

Languages

- Java
- C++
- C
- Assembly
- Python
- JavaScript

Operating Systems

- Windows
- Linux

Databases

- SQL
- MongoDB

Version Control

- GitHub

Web Development

- HTML
- CSS
- SCSS
- Node.js
- React
